Delhi's Push for Digital Classrooms

 Author Name

The Delhi government has launched a major initiative to modernize education by approving a ₹900 crore package for digital classrooms. Under this plan, nearly 21,000 smart classrooms will be set up in CM Shri Schools by 2029–30.

In the first phase, 2,446 smart blackboards will be installed across 75 schools. The project also includes teacher training, upgraded computer and language labs, and the introduction of AI-enabled smart classrooms. Over the next five years, around 5,000 classrooms are expected to become fully digital.

This move aligns with the National Education Policy 2020 and aims to make classrooms more interactive, inclusive, and technology-driven, preparing students for a future shaped by digital learning.
